CONCEPT NOTE:

One of the most important dimensions of any research activity is its methodology. Research methodology is the way of systematically solving the research problem, where the researcher acquaints himself/herself with the various steps adopted to study a research problem and its underlying logic. It is, therefore, important for young and early career researchers to acquaint themselves with both the research methods and methodology. The workshop will enable the researchers to develop the most appropriate methodology for their research studies. The mission of the course is to impart research skills to the beginners and help improve the quality of research by the existing researchers.

The proposed workshop is unique in the way that it attempts to explore new emerging areas of research in Social Science like Transgender, Disability, Aging, Child Rights etc. The workshop shall attempt to acquaint the participants with these contemporary research areas and how to effectively devise respective methodology for such areas of research.

The objectives of the workshop will be to:

- Develop capacity for conceptualizing and writing research proposals.
